

Integration Made Simple

Foundation Connectivity

Create seamless data flow between QAction and your external systems. We use built-in tools to avoid the delays and cost of custom development.

Automated Synchronization

Schedule recurring data syncs to eliminate manual exports and imports. Integration runs automatically on your defined cadence with minimal oversight.

No-Code Mapping

We configure data mappings and transformations using QAction's visual interface—no scripts or custom coding required. This simplifies maintenance and accelerates deployment.

Health Monitoring

We implement basic logging, error detection, and retry logic to keep your integration stable. You'll know when something breaks—and how to fix it.

Flat-Rate Pricing

Flat-rate pricing available via GSA and commercial options. No hidden fees.

Fix Your Broken Data Flow

Frustrated by disconnected systems and manual data entry? Our fixed-fee Basic Integration service bridges the gap—fast. Powered by QAction's built-in integration tools, we deliver seamless connections to your APIs, databases, or file systems with zero custom code.

What's Included?

- One configured integration type (API, database, or file system) with secure connections, data mapping, and automated scheduling.
- Monitoring, logging, and basic error handling to keep your integration running reliably.
- Define and apply data transformation rules to ensure clean, consistent exchanges between systems.
- Deliver a 2-hour training session and detailed documentation so your team can manage and maintain the integration confidently.

Supported Integration Types

Database
Direct sync with SQL/NoSQL

API
Seamless real-time exchange

File System
Simple flat file integration
